

format uses

eps

this is a vector based graphic file which can be opened and edited in Adobe Illustrator or other vector based programs such as Corel Draw. You can scale the image up or down without any loss in quality. An eps file is perfect for stationery & business cards, signage, brochures, vehicle graphics, silk screen & embroidery, etc.

jpg

this is a compressed raster image. These files are perfectly suited to websites, e-mail marketing and Microsoft Office programs such as Word, PowerPoint, etc.

tif

this is an uncompressed raster based file used mainly for storing images. It is still occasionally requested, but if you have this logo professionally printed/reproduced, you will want to use the eps format. tif files are also large in file size.

png

this is a raster image with a transparent background and is typically used in web and television graphics
